

Training wet cleaning

Lanadol wet cleaning: The most eco-friendly way of textile care!

Sensitive materials like wool, silk, and cashmere require special care. The same goes for sophisticated and elaborately assembled textiles like jackets, blazers, or suits.

As ideal cleaning method for handwash items and textiles labeled with the symbols W and P, we have developed the eco-friendly, highly effective Lanadol wet cleaning system in 1991.

Lanadol wet cleaning is by far the most eco-friendly alternative to classic dry cleaning. To use water as a solvent not only protects the environment, but the textile fibers as well. Our trainings will show you how to use Lanadol wet cleaning for even the most sensitive textiles and cover practically all the needs of your customers, using only two Lanadol procedures and our special care products for wet cleaning.

Please apply on time, as the number of participants is limited to 8!

Application for training: Lanadol wet cleaning

Training wet cleaning

Lanadol wet cleaning developed by Kreussler combines highest cleansing power and efficiency with optimal protection of environment and health. In order to use it successfully, a fundamental conversion of operating technology is needed. In our training, we explain in detail the innovative system and the special care agents, the associated technical requirements and the correct application of the special washing and drying procedures. In practical exercises under the guidance of our knowledgeable experts, you immediately put your learnings into practice.
